

Dear Jim Stump and Devorah Haarsma,

I suppose you know that I posted 4 topics on the Open Forum of Biologos.org. The reaction of your members is shocking. The four topics are simple truths about evolutionary biology. In the order I posted the topics:

1) Darwinism just explains adaptation, not common descent. 2) An article about evolution and entropy in the American Journal of Physics is absurd. 3) It is a scientific fact that human beings did not evolve from animals. 4) Darwin contributed nothing to science.

I've compiled all of my corresponded with you and BioLogos members into a single pdf file. I suggest that you allow me to re-post these topics with the help of a moderator. A moderator would not allow me to make ambiguous or irrational statements and not allow irrational responses. Concerning # 2, I said, "A pendulum does not have a temperature." The reply was, "Everything has a temperature." The reply was ridiculous and should not have been allowed. If the moderator did not understand my statement, he could make me explain it before posting it.

As you can see from the pdf file, I also want to tell the BioLogos community about the first amendment lawsuit I filed against Columbia University. I've attached the brief I filed with the U.S. Court of Appeals and an explanation of the lawsuit I submitted to the Higher Chronicle of Education.

Very truly yours,

David Roemer
